

TSNCOIN		
THREE	SIX	NINE
BORN	LIFE	DEATH

Version 1.0.1

TSNCOIN is an innovative platform designed with the aim of increasing income opportunities and saving users’ time and energy. By creating a smart, multi-layered ecosystem, this platform facilitates the path toward financial independence while simultaneously providing a foundation for personal growth and increased user awareness.

Executive Summary

**"If you only knew the magnificence of the numbers 3, 6, and 9,
then you would have the key to the universe."**

Nikola Tesla

TSNCOIN is a financial technology platform designed to increase revenue while saving time and energy. The architecture of this platform is inspired by the cosmic significance of the numbers 3, 6, and 9.

Time and energy are humanity's most valuable assets. Money is merely a tool used to exchange for your time and energy. In most cases, earning money requires spending both. But is the money you earn truly worth the time and energy you spend? Unfortunately, for the majority of people, the answer is no.

That's exactly why we were created.

Through awareness, wisdom, intuition, and knowledge, we've come together to help you create meaningful and positive change in your lifestyle.

After several years of research in the fields of economics and financial markets through trial and error, we have designed a system in the age of digital technology that allows you to increase your income with minimal time and energy.

It's a simple formula: when you have more money, you're no longer forced to spend your time and energy just to earn money. Instead, you can invest these two valuable assets (your time and your energy) into self-development, learning, awareness, and enjoying life.

In fact, through various strategies, we have created systems inspired by the numbers 3, 6, and 9 that smooth the path to increasing your wealth with a combination of mathematical algorithms, technology, and financial markets.

Our mission is to expand your financial and time freedom so you can truly enjoy the short life you've been given. This approach is realized through the TSNCOIN platform, in which games, systems, and digital experiences are designed and delivered as components of a single ecosystem.

We're here to walk this path together, combining material growth with spiritual development to help make our shared journey through life more fulfilling and meaningful.

Executive Summary

This platform has a roadmap and multiple objectives, the most important of which are:

- A dedicated application will be developed for the platform, available as a web app as well as Android and iOS mobile apps.
- Establishing the infrastructure required for the launch of the SAM System
- Listing TSNCOIN on reputable decentralized exchanges (DEX).
- Adding the games section to the application.
- Listing TSNCOIN on reputable centralized exchanges (CEX).
- Utilizing TSNCOIN as a secure and efficient payment instrument.
- Launching a Dedicated Exchange for the TSNCOIN Platform.
- Developing a Proprietary Blockchain for TSNCOIN.
- Building a highly secure web-based software wallet.

There are also other goals set to ensure complete independence from any external organization or system.

Ultimately, our goal is to become a fully self-sufficient platform that operates based on its own proprietary tools and technologies.

Every individual, regardless of their experience or geographical location, can freely use this platform.

All you need is an internet connection.

Introduction

“Every living being is an engine geared into the wheelwork of the universe. Though seemingly affected only by its immediate surroundings, the sphere of external influence extends to infinite distance.”

Nikola Tesla

Around 5,000 years ago in Mesopotamia, the invention of money marked a turning point in human history, revolutionizing trade, simplifying exchanges, and laying the groundwork for modern economies. For over five millennia, humans have traded their most valuable assets (time and energy) for money.

Even today, in the 21st century, despite extraordinary progress in science, technology, and civilization, most people remain caught in the endless pursuit of money, running after it but often never acquiring enough. Throughout history, money has rarely flowed evenly among people.

Unfortunately, the vast majority of wealth has remained concentrated in the hands of kings, emperors, and elites, while the general population was left with little or nothing. This imbalance has shaped societies, limited opportunities, and made financial freedom a privilege of the few.

In every era, most ordinary people could barely afford to meet their most basic needs: food, clothing, and shelter. This harsh reality has persisted for centuries and remains one of the most painful truths of human civilization.

An incredibly small group (those previously mentioned) has, for thousands of years, dominated the masses economically through the establishment and maintenance of a capitalist system.

They have controlled a significant portion of the world's money supply within their financial networks, distributing it through carefully designed cycles, only to reclaim it shortly after by offering goods and services. Not only did they take the money back, but they also profited, because they were the creators, producers, and providers. Ordinary people, on the other hand, were left to play the role of consumers.

This matrix was deliberately designed to leave no alternative path. Most people lacked the time, energy, capital, or resources to become producers themselves.

Introduction

They worked more and consumed more, but the more they consumed, the poorer they became. It was an endless loop, like a hamster running on a treadmill without getting anywhere. Ordinary people, meaning over 96% of the world's population, have long been overexerting themselves to meet their basic needs.

And in truth, a large part of the world's suffering, its sorrow, its crime, and its chaos can be traced back to a single root cause: economic disparity, especially the lack of money in the hands of ordinary people.

Undoubtedly, poverty and economic inequality are among the most significant problems facing human society, holding a prominent place among social issues. Despite widespread progress and development, not only has its prevalence not diminished, but according to available statistics, it continues to increase.

We will provide the infrastructure that will enable users to generate income freely, whether in the short, medium, or long term, helping to reduce the financial pressure caused by lack of money in everyday life.

One of our missions is to continuously improve our infrastructure so that anyone, regardless of their background or experience, can easily join the platform and increase their income.

Here a brief explanation describes how users benefit from the platform:

- **Short-Term:** Earn unlimited income by playing and mastering games within the system.
- **Medium-Term:** Enjoy a guaranteed monthly yield of 12% to 21% through the Staking and Mining System, abbreviated as the SAM System, which also includes a referral and rewards program.
- **Long-Term:** Multiply your wealth by purchasing and holding our cryptocurrency as part of your investment portfolio.

The TSNCOIN Platform Mechanism

"If you want to find the secrets of the universe, think in terms of energy, frequency, and vibration."

Nikola Tesla

Since the cryptocurrency market offers several significant advantages over traditional methods, we have chosen to use this market for conducting financial transactions.

Here are some of the key benefits:

1. High Transaction Speed

In cryptocurrencies, money transfers typically occur within minutes or even seconds, depending on the network. In contrast, traditional methods (especially for international transactions) can take several days (e.g., SWIFT bank transfers).

2. Lower Fees

Most blockchain networks charge very low transaction fees. In comparison, banks and money transfer services (such as PayPal or Western Union) usually impose high fees, particularly for international transfers and micropayments.

3. No Need for Intermediaries or Central Authorities

Cryptocurrencies operate in a decentralized manner, meaning there is no need for a bank or institution to verify transactions. This enables individuals worldwide to access financial services more easily and without the restrictions imposed by banks or governments.

4. High Transparency and Security

Transactions recorded on the blockchain are immutable and cannot be altered or deleted. Everyone can view and track transactions (public transparency). Thanks to advanced cryptography, these systems offer very high security, making fraud or hacking extremely difficult.

5. Easy Access to Financial Services for the Unbanked

More than 1.7 billion people worldwide lack access to banking services. With cryptocurrencies, financial services are accessible with just a mobile phone and internet connection. No bank account or special documentation required.

6. Assets Cannot Be Frozen

Cryptocurrency assets are held in the user's non-custodial wallet, which is protected by private keys. This makes it nearly impossible for banks or governments to block, freeze, or seize these assets, as long as the user maintains control over their private keys.

The TSNCOIN Platform Mechanism

What is Blockchain?

Information is stored in "blocks," each linked to the previous one, forming an immutable and secure chain. Its core attributes include decentralization, transparency, high security, and resistance to tampering or data deletion. Unlike traditional systems where data is stored on centralized servers, blockchain distributes information across thousands of nodes around the world. This decentralized architecture guarantees resilience and security, ensuring that no single entity or authority can exert full control over the network.

Each block contains data such as transactions, contracts, or other records. Once verified and approved by the network's consensus mechanism, the block becomes part of the chain and can no longer be altered. This immutability enables trust without relying on intermediaries like banks or central authorities.

Blockchain technology is not limited to cryptocurrencies. Today, it is used across various industries such as finance, supply chain, healthcare, e-voting, smart contracts, and decentralized applications, offering innovative solutions across both public and private sectors.

In our platform, blockchain technology not only provides a secure and reliable financial infrastructure but also guarantees transparency, fairness, and tamper-resistance across all user interactions.

A Brief History of Blockchain:

The concept of blockchain was first introduced in 2008 by an unknown group or individual using the pseudonym Satoshi Nakamoto. The goal was to create a digital monetary system that could function without the need for centralized intermediaries like banks.

In 2009, Satoshi released the first version of a cryptocurrency called Bitcoin, which became the first real-world application of blockchain technology. Bitcoin used blockchain as a decentralized public ledger to record transactions in a transparent and immutable manner.

Over time, blockchain has evolved beyond cryptocurrency into a robust foundation for various sectors, powering smart contracts, decentralized applications (dApps), digital identity systems, and more.

The TSNCOIN Platform Mechanism

As of today, more than 50 public blockchains exist, but only around 10 to 15 are widely adopted and recognized.

BNB Smart Chain (BSC) is one of these prominent blockchains.

Choosing BSC for the Initial Launch of TSNCOIN

Until the launch of our own native blockchain, we have chosen to deploy TSNCOIN on the BNB Smart Chain (BSC). This decision ensures maximum compatibility, user accessibility, and low transaction costs during the early stages of our platform. BSC's wide adoption and robust infrastructure make it an ideal foundation for TSNCOIN's initial utility and distribution.

Key advantages of BSC over other blockchains:

1. High Transaction Speed

BSC is capable of processing transactions every 3 to 5 seconds, making it one of the fastest public blockchains available. This low latency ensures smooth user experience in decentralized applications (dApps), DeFi platforms, and trading platforms.

2. Low Transaction Fees

One of the main reasons for BSC's popularity is its extremely low gas fees, typically a few cents per transaction, making it highly efficient compared to networks like Ethereum.

3. Cross-chain Compatibility

BSC supports cross-chain assets and interoperability with Binance Chain and other blockchains, making it easier to transfer assets across networks.

4. Security & Network Stability

With frequent security checks, active development, and strong validator structure, BSC offers reliable network performance with minimized risk of downtime or attacks.

5. Wide Wallet Support

BSC is supported by most major wallets including MetaMask, Trust Wallet, SafePal, and more. This enables users to interact with BSC assets easily across devices.

The TSNCOIN Platform Mechanism

Moving Toward the Future with the Dedicated TSNCOIN Blockchain

Vision & Advantages:

We are building our own dedicated blockchain, which is based on three main values; values that are vital for today's decentralized applications: high speed, minimal transaction fees, and strong protection of users' privacy.

The dedicated TSNCOIN blockchain represents a revolutionary advancement in decentralized technology, which, by overcoming the key challenges present in current blockchain systems, establishes a higher standard for speed, security, and performance in the next generation of decentralized applications.

We are committed to delivering a secure, scalable ecosystem designed around users that meets the current demands of the cryptocurrency market and adapts to future advancements. Our phased approach ensures both technical robustness and transparency throughout development and launch.

As we move forward, TSNCOIN will enhance the digital currency landscape and foster a trustworthy environment where users worldwide can participate freely and confidently. Join us as we work together to create a blockchain future that champions privacy, efficiency, and unrestricted global participation.

Technical Evaluation of the Dedicated TSNCOIN Blockchain:

To protect the integrity of our architecture and prevent misuse or replication before launch, we are not publicly sharing full technical details at this time. Once the dedicated blockchain is live, we will release detailed documentation and publish all key specifications through our official channels and website.

Looking Ahead:

Together, we will build a resilient ecosystem that will lead the next generation of decentralized finance.

"Stay with us, and we'll show you how deep the rabbit hole goes."

Coin Information

The ISO 4217 standard is the international framework for encoding currency names, developed by the International Organization for Standardization (ISO), and is widely used in banks, financial markets, accounting systems, and payment infrastructures worldwide. The primary purpose of this standard is to create a common and unambiguous language for identifying currencies in financial transactions and international systems.

According to the logic of this standard, currencies that do not belong to a specific country or national sovereignty typically begin with the letter X, indicating the transnational and independent nature of those assets. Based on this logic, the name XTSN was selected as the symbol of this currency so that, on the one hand, it is inspired by the structure and logic of ISO 4217, and on the other hand, clearly expresses its position as an independent, non-national asset usable within modern financial ecosystems. This naming choice reflects the platform's commitment to international standards and the ability to integrate into global financial and payment infrastructures.

This coin powers all core activities within the system, including internal payments, future services, and blockchain-based mechanisms.

TSNCOIN is developed under the BEP-20 standard and will initially launch on the BNB Smart Chain (BSC). After completing our infrastructure, TSNCOIN will be migrated to its own dedicated blockchain to achieve full independence and greater performance.

Technical Specifications

- Coin Name: TSNCOIN
- Symbol: XTSN
- Standard: BEP-20
- Current Network: BNB Smart Chain (BSC)
- Total Supply: 369,000,000,000
- Supply Type: Fixed Supply
- Decimals: 18

The total supply is permanently fixed and cannot be increased under any circumstances. This ensures sustained scarcity and helps prevent inflation.

Distribution Plan

The entire TSNCOIN supply is divided into four main allocations :

1. 90% - Staking & Mining System (SAM System)

This portion powers mining rewards and incentivizes users to actively participate in the ecosystem.

2. 6% - Market Stabilization & Liquidity Provision

Allocated to reduce market volatility, maintain liquidity on centralized and decentralized exchanges, and ensure stable trading conditions.

3. 3% - Marketing, Airdrops & Technical Support

Used for marketing campaigns, advertising, active-user rewards, future development costs, network security, server infrastructure, and sustaining the TSNCOIN community.

4. 1% - Pre-Sale

Equivalent to 3,690,000,000 coins, reserved exclusively for the pre-sale phase.

Transaction Fees and Anti-Whale System

TSNCOIN will implement a balanced and sustainable fee structure to maintain platform stability. Each buy or sell transaction will be subject to a 1.5 percent fee, ensuring long-term system stability while preventing unnecessary or exploitative activity. There will be no limits on buying volume, and the purchase fee will remain fixed at 1.5 percent. To protect the market from price manipulation by large holders (commonly referred to as whales), TSNCOIN includes an intelligent mechanism known as the Anti-Whale System. This system enforces daily selling limits per wallet and applies a tiered fee structure based on transaction size.

Tiered fee structure based on each wallet's daily selling volume (USD):

Daily Sell Volume (USD)	Fee Rate
\$0 – \$21,000	1.5%
\$21,001 – \$42,000	3.0%
\$42,001 – \$63,000	4.5%
\$63,001 – \$84,000	6.0%
\$84,001 – \$105,000	7.5%
\$105,001 – \$126,000	9.0%

Note: The maximum allowed daily sell volume per wallet is \$126,000 USD. Any transaction exceeding this limit will be automatically rejected by the system and therefore cannot be executed.

The Anti-Whale System helps maintain price stability and user confidence by limiting excessive and rapid selling activity.

All transaction fees collected are directed to the SAM System fund, ensuring continuous reward distribution. This mechanism not only allows more participants to stake and mine, but also strengthens the overall ecosystem by promoting active engagement and long-term sustainability. By reinvesting transaction fees back into the ecosystem, TSNCOIN maintains a self-sustaining model that benefits both users and the platform.

To support the development team and cover infrastructure and security costs, all direct TSNCOIN wallet-to-wallet transfers include a 0.6% transfer fee. These transfers are carried out on the BNB Smart Chain network, and users are required to pay the network gas fee (BNB) separately.

These fees are deposited directly into the support team's operational fund. They are not linked to buy/sell fees or the Anti-Whale System and serve as the team's sole direct revenue source. This structure ensures the platform's long-term sustainability.

The SAM System

Introduction

The Staking and Mining System—referred to as the SAM System—is the economic engine of this platform.

It is a collection of intelligent, engineered, and fully transparent mechanisms designed to create sustainable income for users, increase liquidity, and maintain long-term ecosystem balance. By combining three core components—staking, mining, and economic policies—the SAM System delivers a unique model in which users can earn stable and measurable rewards through real activity and continuous participation.

Why Was the SAM System Created?

The purpose of the SAM System is to enable every user—regardless of capital, knowledge, or time limitations—to earn real and sustainable income from the platform. This system is designed so that users can generate real earnings through small, simple activities without needing to trade, possess financial experience, or take on the heavy risks of the crypto market. The SAM System was created precisely to ensure stability, fairness, and reliable income within the ecosystem, ensuring that no user is left without an opportunity to grow.

What Is the Purpose of the SAM System?

- Establishing a sustainable income cycle and strengthening the platform's internal liquidity
- Increasing the long-term value of TSNCOIN
- Preventing inflation and harmful market behaviors
- Building a self-sustaining and permanent economic model

In this model, user rewards are paid from the powerful SAM System fund, and all calculations are based on USD value to ensure long-term economic stability.

How Is the SAM System Different From Other Income Models?

The SAM System is entirely distinct from traditional investment schemes, old network-marketing models, and Ponzi-style structures. Its key characteristics include:

- Rewards are paid only from real value generated—not from the money of new users
- No mandatory purchases, no entry fees, and no dependency on recruiting people
- A fully mathematical, transparent, and measurable model
- Market behavior control to prevent market crashes and artificial volatility
- An economic architecture where real user activity creates real value
- Referral rewards based on actual profit generated, not on the number of invitees
- Capital can be withdrawn at any time with no lock-up period

This structure makes the SAM System one of the most stable and exceptional Web3 income models—one that not only guarantees the platform's sustainability but also intelligently allows users to share in the growth of the ecosystem.

The SAM System

Core Principles and Fundamental Rules of the SAM System

The SAM System is designed based on a set of economic and operational principles that users are required to fully understand before participating in staking and mining processes. The core foundation of this system is a USD-based value economy for TSNCOIN, defined in United States dollars (USD). All payments, rewards, and financial calculations are carried out based on the real-time value of TSNCOIN, not on the number of coins. As a result, market fluctuations of TSNCOIN do not affect the dollar value of users' rewards, and users always receive TSNCOIN equivalent to the real dollar value of their assets; it is evident that the number of coins received may vary in accordance with the market price.

The miners in the SAM system are entirely software-based and have no dependency on hardware, device resources, or energy consumption. When a user rents a miner, it is initially in an inactive state, and the energy required for its activation is provided through the user's activities. Each daily activity provides a portion of the miner's operational time, and as a result, with increased user activity, the miner also remains on and active for a longer duration. To receive rewards, users must keep their miner active for a total of 720 hours. All users have up to 369 days from the moment they rent the miner to complete this 720-hour mission. If the user fails to complete the mission within the specified period, or if the remaining time is insufficient to reach 720 hours, the miner is automatically deactivated and the rental fee, equivalent to its dollar value, is returned to the user in the form of TSNCOIN without any reward. Additionally, users may voluntarily withdraw at any time and receive the equivalent dollar value of their rental fee in the form of TSNCOIN.

The SAM System reviews all activities online and on a server-based basis in order to prevent fraud. The use of multiple accounts without real activity, attempts to simulate user behavior, or the execution of abnormal activities are automatically detected. Initially, a warning is issued to the offending user, and if the unauthorized behavior continues, the user's account will be suspended. This mechanism ensures that rewards are paid solely based on real and measurable activities.

All earned rewards are first recorded as internal credit in the user's account. This credit functions like a financial unit usable within the platform, which can be used for renting new miners, upgrades, in-app purchases, and also in the gaming section. Users can at any time transfer their credit to the wallet connected to the app so that the equivalent amount of credit in TSNCOIN is deposited for them. This structure significantly improves speed, transparency, and asset management. The rules for renting and upgrading miners are defined in a simple and transparent manner. After selecting the desired league and level, users are required to pay 1% of the miner's price as an activation fee. It is worth noting that this fee will be deducted under all circumstances—whether the mission is completed or not, or even in case of a refund request—and will be directly deposited into the main fund of the SAM system. This plays a significant role in long-term economic stability. Upgrading a miner is done by renting higher levels. There is no time restriction or limit on the number of times this can be done. The structure of the SAM system is designed in such a way that economic stability, prevention of abuse, sustainable income, and the possibility of capital return at any moment are guaranteed for all users.

The SAM System

Economic Cycle of the SAM System

As previously mentioned, users perform a set of simple daily activities in order to mine TSNCOIN. These activities include viewing advertisements, participating in surveys, engaging on social media, and completing small in-app tasks. Each of these actions constitutes a part of the SAM System revenue model and enables the generation of sustainable income without reliance on attracting new capital. All revenue generated from these activities is used, in a fully transparent manner and without any additional deductions, to directly purchase TSNCOIN from the market. These purchases are carried out continuously and in a planned manner, and the acquired coins are transferred directly to the main SAM System fund. This process, in addition to maintaining ecosystem stability and liquidity, creates a continuous and natural flow of demand in the market, which contributes to increasing the value and economic resilience of TSNCOIN. On the other hand, as the level of user activity increases, the system's revenue also rises, resulting in a higher volume of market purchases and a greater number of coins entering the fund.

Within this structure, the SAM System fund is continuously strengthened, and its capacity to support more miners and distribute sustainable rewards increases. This cycle of buyback and reinjection of revenue creates a sustainable and dynamic economic loop in which user activity leads to the generation of real value, increased internal liquidity, and long-term reinforcement of the ecosystem.

This model makes the SAM System one of the few systems that, without the need for new capital inflows, possesses the ability to grow, develop, and deliver sustainable rewards over the long term.

The SAM System

Hybrid Staking + Mining Model in the SAM System

The SAM System uses a unique hybrid structure in which staking (locking the dollar value through miner rental) is combined with mining (activating the miner through user activities). This model enables users to experience a real value-generation process without energy consumption, device costs, or the need for hardware. In this structure, staking stabilizes the dollar value of the miner, and mining makes the reward of that same value withdrawable through user activity. The combination of these two creates a stable and reliable revenue cycle that is not comparable to traditional mining models.

How Yield Is Calculated in the SAM System

Miner rewards in the SAM System are calculated based on a predetermined yield percentage assigned to each league. This reward becomes withdrawable after completing the 720-hour mission, which represents a full mining cycle. By keeping their miner active throughout this period, users receive their specified monthly reward.

A Sustainable and Non-Inflationary Economic Logic for Miner Yield Rates (12% to 21%)

The percentage-based reward structure is designed to enable profit distribution for a large number of miners without creating liquidity pressure. Setting stable and logical rates also prevents the formation of inflationary cycles and dependency on new investment, ensuring long-term predictability. In each league, the yield percentage is fixed, and three miners with different prices exist within each league. However, on a broader scale, cheaper miners offer higher yields, while more expensive miners provide lower yields. This ultimately creates an optimal balance between wide user accessibility and the long-term economic sustainability of the ecosystem.

Structure of Leagues and Miner Levels

To accommodate various user needs, each league includes three miners with different prices, resulting in a total of twelve miners in the system. The rate of yield within each league is fixed, and only the investment amount varies. Accordingly, the arrangement of miners across leagues and levels provides broad and flexible options suitable for users with different financial capacities.

The miner system is categorized into four leagues:

Bronze Miners League offers a monthly yield of 21%

Silver Miners League offers a monthly yield of 18%

Gold Miners League offers a monthly yield of 15%

Diamond Miners League offers a monthly yield of 12%

The SAM System

Details of SAM System Leagues and Miners:

Bronze Miners League	Miner Level	Miner Price	Profit Percentage	Profit Amount
	Level One	\$33	21%	\$6.93
	Level Two	\$66	21%	\$13.86
	Level Three	\$99	21%	\$20.79

Silver Miners League	Miner Level	Miner Price	Profit Percentage	Profit Amount
	Level One	\$333	18%	\$59.94
	Level Two	\$666	18%	\$119.88
	Level Three	\$999	18%	\$179.82

Gold Miners League	Miner Level	Miner Price	Profit Percentage	Profit Amount
	Level One	\$3,333	15%	\$499.95
	Level Two	\$6,666	15%	\$999.90
	Level Three	\$9,999	15%	\$1,499.85

Diamond Miners League	Miner Level	Miner Price	Profit Percentage	Profit Amount
	Level One	\$33,333	12%	\$3,999.96
	Level Two	\$66,666	12%	\$7,999.92
	Level Three	\$99,999	12%	\$11,999.88

The SAM System

Nature and Role of the Leagues

The SAM System operates through a four-league structure, where each league plays a specific and essential role in maintaining the stability and balance of the ecosystem. This model enables users to enter the mining process and progress step-by-step based on their financial capacity. Beyond offering different yields, each league contributes uniquely to liquidity circulation, fund stability, and overall community growth.

Bronze Miners League: Entry point for new users

This league represents the safest and most economical starting point for users who are new to the ecosystem. With low costs and a 21% yield, it serves as an ideal gateway into the mining journey. The Bronze Miners League forms the core of the user community and plays a vital role in expanding the adoption of the SAM System.

Silver Miners League: Beginning of real and sustainable income

This league offers the best balance between price and yield. With an 18% yield and mid-range pricing, it is the natural next step for users who have progressed beyond the Bronze League and seek more reliable and stable income. Silver miners represent the central pillar of the ecosystem and serve as the primary source of sustainable revenue within the SAM System.

Gold Miners League: The advanced and high-yield league of the SAM System

The Gold Miners League, earning a 15% yield, operates within a higher price range and is well-suited for more experienced users. Since members of this league typically engage more actively, they play a significant role in stabilizing the economic cycle and strengthening the fund. This league stands as one of the most popular levels in the system, contributing a substantial share of the platform's active liquidity.

Diamond Miners League: A premium level for expert users

The final league, offering a 12% yield and the highest price levels, represents the most advanced tier of mining in the SAM System. Users in this league—through higher investment levels—play a crucial role in sustainably reinforcing the fund, increasing payout capacity, and supporting the economic structure. The Diamond Miners League acts as the primary backing and trust-building engine of the SAM System and plays an important role in increasing the value of TSNCOIN.

Why is this league-based structure necessary?

League structure is not a random decision; rather, it is an economic requirement for ensuring the long-term health and sustainability of the SAM System. It provides the following advantages:

- Fair reward distribution among users with different financial capabilities
- Preventing capital concentration and reducing systemic risk
- Creating a structured, step-by-step progression path for users
- Increasing motivation for daily activity and long-term community growth
- Attracting every type of user—from newcomers to professional investors

And most importantly: ensuring the long-term sustainability of the SAM System fund and preventing inflation.

Referral and Rewards

Introduction and Core Structure

The SAM System referral program, with the aim of creating a large user community, provides all members the opportunity to earn real, transparent, and measurable income. Unlike many traditional network-based models, referral rewards in the SAM System are released only when real profit has been generated. In other words, real profit must be generated first, and then referral rewards are paid. This means that the referral reward is only paid when the invited user has completed the 720-hour mining cycle and earned real profit. Such a design ensures that all incentives remain aligned, transparent, and resistant to abuse. All referral rewards are paid from the main SAM System fund; therefore, users' direct earnings are never reduced. As a result, as the network expands, the ecosystem's sustainable revenue also increases. Each user account has a unique referral code, and users can use this code to invite others to join the SAM System.

To prevent potential abuse and to establish a fair structure within the referral system, referral rewards for each league are activated only when the user themselves has completed the 720-hour mission at least once in that same league.

Important Notes:

- If a user has completed only their mission in the Bronze Miners League, only the profits generated by referrals active in that league will be counted for them; referrals in higher leagues will not generate any rewards for the user.
- Once the user enters a higher league and completes its 720-hour cycle, from that point onward, the profits of referrals active in that league, as well as in the leagues in which the user has previously been active, will also be calculated for them.
- If a referral becomes active in a league and earns profit before the user, that profit will not generate any reward for the user.

This rule ensures that users can only receive referral rewards in leagues where they have personally participated and completed the corresponding mission. It establishes a fair, abuse-resistant, and sustainable structure for all members of the SAM System community.

The SAM System referral and reward program is designed in three levels: Stage 1, Stage 2, and Stage 3. Each of the miner leagues (Bronze, Silver, Gold, and Diamond) has an independent structure and calculation logic. User performance in each league is recorded and calculated separately, so that the profit and rewards generated in one league are allocated solely to that league and have no effect on the other leagues.

In each league, the referral reward rate is determined based on the profit percentage of the miners in that league. This percentage is applied equally across all three referral stages, with no difference in reward rates between levels. However, receiving the reward for each stage is conditional upon its activation.

A stage is activated when the (Total Rewards Generated) reach the specified threshold.

Once the activation conditions are met and the threshold is reached, the reward for that stage is automatically paid, and the calculation cycle for that stage starts anew. This cyclical structure allows for unlimited reward earnings; meaning that each time the users referred in a stage reach the required threshold again, a new reward for that stage will be paid to you. This model ensures sustainability, transparency, and continuous growth motivation for the referral network.

The full details of the reward activation conditions will be explained in the next section.

Referral and Rewards

SAM System Referral Program Calculations:

	Referral	Total Rewards Generated	Referral Profit Percentage	Your Referral Reward
Bronze Miners League	Stage One	\$249.48	21%	\$52.39
	Stage Two	\$748.44	21%	\$157.17
	Stage Three	\$2,245.32	21%	\$471.51

	Referral	Total Rewards Generated	Referral Profit Percentage	Your Referral Reward
Silver Miners League	Stage One	\$2,157.84	18%	\$388.41
	Stage Two	\$6,473.52	18%	\$1,165.23
	Stage Three	\$19,420.56	18%	\$3,495.70

	Referral	Total Rewards Generated	Referral Profit Percentage	Your Referral Reward
Gold Miners League	Stage One	\$17,988.20	15%	\$2,699.73
	Stage Two	\$53,994.60	15%	\$8,099.19
	Stage Three	\$161,983.80	15%	\$24,297.57

	Referral	Total Rewards Generated	Referral Profit Percentage	Your Referral Reward
Diamond Miners League	Stage One	\$143,998.56	12%	\$17,279.82
	Stage Two	\$431,995.68	12%	\$51,839.48
	Stage Three	\$1,295,987.04	12%	\$155,518.44

Referral and Rewards

Referral Reward Calculation and Stages Activation Mechanism

In the SAM System, all referral calculations are performed based on the real profit generated by your team.

How is the (Total Rewards Generated) calculated?

All rewards earned by team members in each stage are summed separately, and at the end, the (Total Rewards Generated) for each stage is calculated independently.

$$iP \sum_{i=1}^n = \text{Total Rewards Generated (Stage X)}$$

iP = the actual profit generated by user i in that same stage.

n = the total number of active members in that stage.

All profits are calculated only within the same league (independently from other leagues).

The referral reward for each stage is equal to the league's profit percentage multiplied by the (Total Rewards Generated) in that stage.

$$\text{Referral Reward} = \text{Total Rewards Generated} \times \mathcal{P}$$

$\mathcal{P}$ = the yield percentage of the same league

(Bronze 0.21, Silver 0.18, Gold 0.15, Diamond 0.12).

Example (from the table on page 19): Bronze Miners League

$$\text{Total Rewards Generated} = 249.48$$

$$\mathcal{P} = 0.21$$

$$\text{Referral Reward} = 249.48 \times 0.21 = 52.3908$$

In order for the rewards to be paid, the total actual profit generated by the team in that stage must reach the predetermined threshold.

If $\text{Total Rewards Generated} \geq T_x \Rightarrow \text{stage X Reward} = \text{Active}$

T_x = is the activation threshold required for stage X.

In plain terms:

the (Total Rewards Generated) by your team in the stage must reach the specified threshold.

Once the threshold is met, the reward for that stage becomes active and is paid immediately.

Note:

Once the threshold is reached, the reward is automatically added to the user's internal balance and can be transferred to the connected wallet at any time. Each time the (Total Rewards Generated) reach the specified threshold again, a new reward is released, with no limit on the number of times this process can occur. The SAM System imposes no time-lock or mandatory holding period on referral rewards.

Referral and Rewards

A Practical Example of Referral Reward Calculation:

Gold Miners League – Level Three Miner

Initial Assumption:

VIP User: Mr. Abraham

Users directly referred by him:

- User One: Mr. Ben Amram
- User Two: Mr. Nazareth
- User Three: Mr. Muhammad

The third user, Mr. Muhammad, introduced the platform to 12 additional users. We assume no other users join after this point, and all existing members complete their daily missions and earn profit.

Stage One Reward Calculation for Mr. Abraham

Profit earned by each Level Three miner in this league: \$1,499.85

Number of Stage One members referred by Mr. Abraham: 3 users

(Total Rewards Generated) for Stage One in the first month: $3 \times 1,499.85 = 4,499.55$ USD

(Total Rewards Generated) for Stage One after three months: $3 \times 4,499.55 = 13,498.65$ USD

The activation threshold for receiving the Stage One referral reward is \$17,988.20.

Therefore, Mr. Abraham still needs an additional \$4,499.55 for the Level One reward to be activated.

In other words, he is still one month away from receiving this reward.

Activation of Mr. Abraham's Stage Two Reward

Due to the growth of Mr. Muhammad's team at Stage Two, the total profit in Stage Two has reached: \$53,994.60

Thus, the Stage Two reward for Abraham is activated.

Reward: $15\% \times 53,994.60 = 8,099.19$ USD

This amount is immediately added to his internal credit and can be transferred to the wallet connected to the app at any time.

Status of Mr. Muhammad

Since he has referred 12 users and consistently reaches the Stage One threshold (\$17,988.20) each month, he has so far received the Stage One reward of \$2,699.73 three times.

XTSN GAMES

General Description

The XTSNGAMES section is one of the most popular parts of the XTSNAPP super-application, offering users a combined experience of entertainment, real competition, and direct income generation. This section operates entirely independently from the SAM System and the mining process, yet it enables users to increase their internal credit by participating in games and use that credit across all sections of the platform.

General Structure of XTSNAPP and Access to the Gaming Section

XTSNAPP is developed based on PWA technology, meaning it is built once and can be used across web, Android, iOS, and even desktop environments. As the number of users grows and the need for more advanced capabilities increases, a native version will be introduced in later development stages. After registration and login, users can connect their external wallets to the app through the Profile section and perform deposit and withdrawal operations for TSNCOIN. Most activities within the platform, including games, operate using internal credit to ensure maximum speed, stability, and quality of user experience. The user profile also supports customization options such as selecting an avatar, editing a biography, and choosing a background. Additionally, a multi-layer leaderboard system (global, continental, and categorized) is available, allowing users to view their performance and ranking compared to other players.

Game and Lobby Structure

The XTSNGAMES section features a collection of simple, fast-paced, and highly engaging minigames. These include the sniper, archery, snooker, racing games, rock-paper-scissors, card-based games, and many other games that will be gradually and continuously added to this section over time.

All games are designed exclusively for competitive one-on-one gameplay. To enter any match, users must hold a specific amount of TSNCOIN equal to the dollar value defined for the selected lobby.

Players can play the games an unlimited number of times, with no restrictions.

Game lobbies are divided into two main categories:

1. Default Lobbies

Default lobbies are available at predefined value levels ranging from \$1 to \$10. To join a lobby, the user must have TSNCOIN in their account equivalent to the dollar value of that lobby.

For example, to enter a \$5 lobby, a user must hold TSNCOIN with a total value of at least \$5 in order to participate in the match.

2. Custom Lobbies

Custom lobbies are designed for more experienced players. The lobby creator can define the match value within a range of \$11 to \$100.

In addition, a free custom lobby is available for practice purposes. Each user may access the free practice lobby up to 3 times per hour and a maximum of 9 times per day.

XTSN GAMES

The Role of TSNCOIN in the XTSNAPP and Its Usage

When TSNCOIN is introduced into the application, users retain full ownership of their assets within their accounts, and the value of these assets may increase or decrease in line with market price fluctuations. However, the structure of games and lobbies is based on the USD value of each match, rather than a fixed number of coins. Each lobby is set based on a fixed dollar value, and the amount of TSNCOIN required to join is calculated accordingly. This model ensures that match pricing remains transparent, easy to understand, and independent of short-term market volatility.

The outcome of each match is also calculated based on the same dollar value, and its result is added to the player's account in the form of TSNCOIN as internal credit. The credit that users obtain through gameplay and winning matches can be used across different sections of the platform, including participation in additional matches, use of in-app services, or renting miners within the SAM System.

Match Participation Mechanism and Reward Distribution

In each competition, both players enter a predefined amount of credit into the match before the game starts, based on the dollar value assigned to the selected lobby. This credit is securely held by the server until the match concludes, and neither player has access to it during the game.

After the game ends and the final result is determined:

- The entry credit of both players is released
- A fixed platform fee of 1% is deducted from the total credit
- The remaining amount is fully added to the internal balance of the winning player

Simple Example:

\$1 Lobby

Each player enters credit equivalent to \$1 (a total of \$2).

A platform fee of 1%, equal to \$0.02, is deducted.

As a result, the net credit received by the winning player—equivalent to \$1.98—is added to their account in the form of TSNCOIN.

All fees generated from hosting matches are allocated entirely and exclusively to the development and improvement of the XTSNGAMES section. These resources are used to enhance technical infrastructure, improve system performance, and develop new games, and are utilized independently of other platform components, solely in support of sustainable growth and an improved user experience within the gaming ecosystem.

XTSN GAMES

Security and Privacy Considerations

All communications between users and the platform's infrastructure are conducted exclusively through the secure HTTPS protocol and up-to-date web security standards to prevent any form of interception or tampering. Wallet connections are activated only with explicit user authorization and solely for deposit and withdrawal operations, with no permanent access to user assets or wallet information. Sensitive user data is stored in encrypted form and is used only within the scope of essential and executable platform functions. This architecture ensures that user privacy is consistently protected and that information security is maintained at the highest possible level.

Monitoring and Anti-Cheating System

Maintaining fair competition and user trust is considered one of the fundamental principles of the platform. Any form of cheating or manipulation in the course of gameplay represents a definitive red line for this platform. With a firm and uncompromising approach, XTSNGAMES has designed a multi-layered framework for monitoring, control, and prevention of unauthorized behavior in order to ensure a secure, fair, and reliable environment for all users.

All critical game logic, result calculations, and winner determination are performed exclusively on the central server, and no decisive decisions are delegated to the client side. In addition, XTSNGAMES utilizes advanced AI-based anti-cheating systems to monitor all matches in real time. Player behavior, movement patterns, and sensitive game data are continuously analyzed, and match videos are stored for a specified period to allow for detailed review when necessary. These systems are continuously updated and reinforced to ensure ongoing detection of, and effective response to, new cheating methods.

If, during an active match, the use of cheating tools or unauthorized behavior is detected, the game is immediately terminated and the offending player is declared the loser. If a violation is identified after the conclusion of a match through system reviews or user reports, the case will be reviewed in the shortest possible time. Upon confirmation of cheating, in addition to disciplinary action, a monetary penalty will be imposed on the offending user. Under such circumstances, the rights of the affected player will be fully protected. If it is proven that a match involved cheating, the platform, without any conditions or limitations, will refund the losing player's entry amount from the platform itself in the form of TSNCOIN credited to the user's account. For example, if cheating occurs in a lobby with a value of USD 3, an amount equivalent to USD 3 in TSNCOIN will be credited by the platform to the affected user.

XTSN GAMES

Ensuring Fair Competition for Players

The most fundamental principle of our platform, which governs all competitive mechanisms, is the implementation of fairness for all users. We believe that the enjoyment of genuine competition can only be achieved when each player competes against opponents whose abilities are comparable to their own. For this reason, our platform ensures that all competitions are conducted in a fully balanced environment and based on the actual skill level of participants.

To achieve this goal, we continuously evaluate players' skill levels based on key performance indicators, such as the number of games played and the scores earned in each match. These data, combined with advanced algorithms and supported by artificial intelligence, provide accurate insights into the true skill level of each user, enabling the matchmaking process to be carried out with maximum precision.

One of the most serious challenges to maintaining fairness is the phenomenon of smurfing, which refers to the deliberate participation of a highly skilled and experienced player in beginner-level competitions through alternative identities. Our platform uses advanced artificial intelligence models and professional player behavior monitoring tools to detect such activities. If these violations are confirmed, the offending player's account will immediately be subject to predefined restrictions, penalties, and sanctions, ensuring that the rights of other players are protected.

Penalty Levels and Violation Fines

The disciplinary system of XTSNGAMES is designed in a progressive and transparent manner:

First Stage: Account suspension for up to 3 weeks, along with a USD 101 monetary penalty

Second Stage: Account suspension for up to 3 months, along with a USD 101 monetary penalty

Third Stage: Account suspension for up to 3 years, along with a USD 101 monetary penalty

Fourth Stage: Permanent account ban with no possibility of reinstatement

During the suspension period, the user's account is completely frozen, meaning that deposits, withdrawals, or access to any platform services will not be available. After the suspension period ends, reactivation of the account will be conditional upon full settlement of the applicable penalty.

Match Disconnection Rules

To manage disconnection conditions and preserve competitive fairness, the following rules apply: If one player disconnects, a 90-second grace period is activated to allow the player to return to the match. If the player does not return within this period, the disconnected player will be declared the loser. If both players experience a disconnection, the player who exited the game earlier will be considered the loser. If a disconnection occurs simultaneously for both players, the match is canceled and the entry fee of both participants is refunded to their balances; however, the fixed 1% fee will still be applied.

XTSN GAMES

Social Interactions and the Future Outlook of XTSNGAMES

The XTSNGAMES section is designed with a strong focus on enhancing social interactions and delivering a smooth, engaging, and user-centric experience, and throughout its development path, it will be gradually equipped with more advanced features. In upcoming phases, all game lobbies will be enabled with a spectator feature, allowing users to join matches as viewers, follow gameplay in real time, and interact with players through emojis and live reactions. This functionality elevates the competitive environment beyond a purely individual experience, transforming it into a more social and entertaining space.

Furthermore, in later stages of development, a friend-adding feature will be introduced to the platform, enabling users to build more stable connections and create a more personalized social network. In addition, a game exploration section will be added, allowing users to view live matches of friends and professional players and gain inspiration from high-level competitive gameplay. Collectively, these features will transform the XTSNGAMES section into a growing, flexible, and socially driven environment that supports continuous user interaction.

Alongside these features, comprehensive planning has been put in place for the organization of periodic tournaments, weekly ranking systems, performance-based rewards, sponsorship opportunities, and professional incentives. These mechanisms enable active players to follow a clear and goal-oriented progression path. Over time, players can continuously strengthen their position within the XTSNGAMES section. In addition, a variety of scheduled challenges will be designed for users, through which participants, upon successful completion, may receive exclusive non-monetary rewards, including special emojis, animated stickers, flags, and unique skins that distinguish player identities on the platform. This competitive and incentive-based structure will be developed gradually and in parallel with the growth of the user community, contributing to the growth and sustainability of the ecosystem.

In subsequent stages, the platform will enable the issuance and trading of decorative and interactive items such as skins and stickers. These items may be offered as digital assets (NFT) and will be tradable within the platform. All transactions will be subject to a defined fee (1%), and pricing will be managed in a controlled manner by the platform to preserve economic balance and fairness in the user experience.

The development strategy for the XTSNGAMES section is designed in a phased manner. In the initial stage, the primary focus is on fast, two-player, and competitive mini-games to provide a simple and accessible experience for users. After this stage is stabilized and the user community grows, development will expand toward larger and more professional games, as well as advanced competitive modes such as battle royale and multiplayer tournaments. This gradual approach ensures that game development consistently remains centered on quality, sustainability, and user experience.

XTSN GAMES

TSNCOIN's Commitment to Security, Fairness, and User Trust

The TSNCOIN platform is committed to leveraging all of its technical, human, and infrastructural capabilities to provide users with a secure, transparent, fair, and trustworthy environment. Protecting user security and maintaining user trust are among our highest priorities, and any attempt to exploit, defraud, or violate the principles of fair competition will be addressed in accordance with the platform's policies and enforcement mechanisms. The XTSNGAMES anti-cheat system has been designed to protect users' rights and preserve the integrity of the competitive environment, ensuring that all participants can compete on a fair and reliable playing field.

This whitepaper provides an overview of our philosophy, principles, and approach regarding the XTSN gaming sector. Complete details of the rules, game conditions, operational procedures, ranking criteria, and disciplinary regulations will be published transparently and comprehensively in the dedicated documents and specialized sections related to XTSN games, ensuring that the competitive framework remains clear, predictable, and trustworthy for all users.

Conclusion and the Role of XTSNGAMES

XTSNGAMES, as one of the interactive pillars of the TSNCOIN platform, provides users with a competitive, entertaining, and revenue-oriented gaming experience, while being designed to be fully independent from the SAM System (mining and referral models) from a technical, economic, and structural perspective. This section, without creating mutual dependencies, simultaneously plays an effective role in attracting new users, increasing daily engagement, and generating sustainable revenue streams. XTSNGAMES can serve as an initial entry point for users into the platform and gradually introduce them to other components and capabilities of the platform, without technical or economic complexity becoming a barrier to starting the user experience.

Vision and Future of TSNCOIN

Our vision is completely clear and innovative:

To create a fully decentralized ecosystem in which users' activities generate real value, and this value is distributed directly, transparently, intelligently, and fairly among all members. We aim to transform the way people interact with the digital economy—a transformation in which the user's time and energy, without the need for heavy investments or complex models, turns into a sustainable source of income. TSNCOIN seeks to be a bridge between the blockchain industry, gaming, indirect mining, and the collaborative economy—a place where every user can be part of global growth and progress.

The beginning of a lasting journey:

This platform is not merely a temporary measure; rather, it represents a strategic, step-by-step path for building a decentralized economic world. Our goal is to create an infrastructure that can be developed, updated, and scaled for years, so it can grow and remain responsive alongside technological advancements and changing user needs. We are not only building an economic platform; we are striving to create a positive, real, and lasting change in the lives of individuals and the global community. Earth is our shared home, and all human beings living on it are considered our family. The TSNCOIN platform is built upon this very belief—the belief that even the smallest act of kindness can make the world a better place to live.

In the continuation of this journey and in the near future, we will introduce a series of spiritual, humanitarian, and value-based challenges through which users can record videos of completing these challenges and positive activities and send them to us. These inspiring actions will be published on TSNCOIN's official social media platforms to multiply their impact and positive energy. TSNCOIN is not merely an economic platform; it is a movement to build a better, more humane, and more human-value-aligned world.

Our ultimate goal is to create a sustainable, profitable, and global platform—one that enables millions of people around the world to earn real and continuous income for the first time, simply by spending a small amount of time, limited energy, and risk-free digital activity. TSNCOIN is, in fact, a quiet revolution—a revolution that begins with the users, is built for the users, and ultimately, its ownership will belong to the users.

The vision and economic future of TSNCOIN:

Support, Transparency and Trust Framework

User Support Structure

The TSNCOIN platform utilizes a multi-channel and structured support system to ensure that users can maintain effective and reliable communication with the support team at every stage of their activity. Users can contact the support team through the platform's internal ticketing system, the official website, and the official email, and in the future, an advanced support dashboard will also be added to this structure. Each request, report, or complaint is registered with a unique identifier (Ticket ID) and can be fully tracked. One of our goals is to gradually move toward providing 24/7 support and responding in the shortest possible time so that users always feel confident and supported.

Transparency in Decision-Making

Transparency is one of the key principles in the design and management of the TSNCOIN platform. All platform rules, fee structures, game mechanisms, disciplinary procedures, and fines are predefined, documented, and made available to users. No sudden or non-transparent changes will be applied to these matters, and if any update or modification is required, the necessary notification will be provided in advance and in an official manner. This approach ensures that users always operate on the platform with full awareness and without ambiguity.

Trust-Building Mechanism Between the Users and the Platform

User trust is the fundamental foundation of the growth and sustainability of the entire ecosystem. This platform is designed with a responsible and user-centric approach to provide a secure, fair, and reliable environment for all members. TSNCOIN considers itself committed to always standing alongside users, protecting their rights, and delivering a transparent and dependable experience. Every decision, every mechanism, and every new development is carried out with the aim of strengthening this trust and creating peace of mind for users, because we believe that trust is the most important shared asset between the platform and its community.

The Future Path of Trust and Accountability

TSNCOIN does not view trust as a short-term objective, but rather considers it a continuous and long-term process. The platform is committed to continuously increasing its level of accountability and transparency through ongoing process improvements, infrastructure enhancements, and listening to user feedback. TSNCOIN's development path is shaped around responsibility, transparent communication with users, and the creation of a sustainable and two-way relationship, in order to provide a trustworthy and forward-growing ecosystem for the future.

Legal Considerations and Risks

Legal Status and Scope of Responsibility

The TSNCOIN platform is designed as a digital infrastructure based on blockchain technology and online services, and its activity framework is defined in accordance with general digital commerce laws, the use of digital assets, and regulations related to online services. Use of TSNCOIN services constitutes acceptance of the rules, terms of use, and official policies published on the platform. TSNCOIN is committed to developing and updating its operational, technical, and executive structures within the framework of applicable laws.

User Responsibilities and Method of Use

Users are responsible for maintaining the security of their user accounts, access information, and their own decisions when using the platform's services. All activities, including participation in games, use of in-app services, and asset management, are carried out with the users' full awareness and consent. TSNCOIN assumes no responsibility for users' individual decisions outside the technical and defined operational scope of the platform, and responsible use of the services is considered part of the transparent interaction between the user and the platform.

Risk Considerations and Natural Volatility

Like any digital system based on cryptographic assets, the use of TSNCOIN services may be affected by factors such as market fluctuations, network technical conditions, and environmental changes. These factors are part of the inherent nature of digital ecosystems, and TSNCOIN, through the design of transparent structures and the provision of control tools, strives to enable users to make decisions with a clearer understanding of their operating environment, without the user experience being burdened by complexity or ambiguity.

Summary of the Legal and Trust-Oriented Approach

TSNCOIN's approach is built on transparency, accountability, and the establishment of a sustainable framework between the platform and users. This section of the whitepaper is presented with the aim of creating a shared understanding of the scope of responsibilities, user rights, and the path of long-term interaction.

The Platform's Core Team and Leadership

The TSNCOIN platform has been designed and developed by a team composed of experienced specialists across various fields of technology, a team in which each member plays a defined and key role in the formation and advancement of the platform. The focus of the TSNCOIN technical team is on creating a stable, secure infrastructure aligned with current technological standards—an infrastructure capable of serving users on a global scale and, over time, growing and evolving without any degradation in quality.

At TSNCOIN, the development and management teams operate in an integrated manner. Technical decisions, product design, and the platform's development roadmap are carried out in a coordinated way with a long-term perspective. This integrated structure ensures that the platform benefits from technical coherence, operational stability, and strategic clarity, with each component serving the overarching goal of the ecosystem.

The core team behind the TSNCOIN platform has consciously decided to operate without disclosing personal information or the identities of its members. This decision is rooted in the platform's philosophy, which prioritizes platform integrity, technical accountability, and sustainability over individual visibility; The team's anonymity, by reducing individual biases, external interference, and the excessive concentration of power in the hands of individuals, enables the platform to be evaluated solely based on its architecture, transparency, and actual performance.

However, we now intend to introduce the CEO and designer of TSNCOIN to you.
..... (Please enter your first and last name in this section)

With this introduction, you are no longer just a user; rather, you are invited to become part of the roots and the heart of this platform. TSNCOIN believes that every user, regardless of their level of activity or investment, has a real role in shaping the future path of the platform. Every piece of feedback, every contribution, and every interaction directly or indirectly influences decision-making and the growth of the ecosystem. This platform derives its meaning through the participation of its community, and without users, it remains only an idea.

In the future, and in parallel with the growth of the platform, the TSNCOIN team will expand with the addition of new specialists, professional advisors, and strategic partners. This expansion will take place gradually, purposefully, and without haste; without performative hiring and without unrealistic exaggeration. Quality, commitment, and alignment with the platform's values will be the primary criteria for this growth.

We will always remain in communication with you. However, to ensure the security, focus, and integrity of the platform, TSNCOIN does not publicly disclose the identities of its team members. This decision does not stem from distance, but from responsibility. Ultimately, regardless of where we live in the world, what language we speak, or what differences we have in appearance and culture, we are all part of a whole. We are you, and you are us. Together, we can build TSNCOIN, grow it, and turn it into a shared, transparent, and sustainable experience for everyone.

Pre-Sale

As previously noted in this whitepaper, 1% of the total TSNCOIN supply has been allocated to the pre-sale phase. Given the high importance of this phase, its technical complexities, pricing structure, participation rules, and the critical role of the pre-sale in the future of the platform, it has been decided to design and publish a separate whitepaper dedicated exclusively to the pre-sale section. This separate document will comprehensively address the technical, economic, and operational details of the pre-sale and will be considered the primary reference for the review of this phase.

Pre-sale in blockchain ecosystems is one of the key tools for creating a powerful launch, forming an initial community, providing targeted liquidity, and regulating the balance of supply and demand in the early stages of a platform. Every professional platform designs a dedicated pre-sale model in accordance with its vision and economic architecture, and TSNCOIN has also defined this stage with a calculated, transparent, and long-term approach.

The TSNCOIN pre-sale begins with a starting price of \$0.000369 and is designed in a stepwise manner; meaning that as the volume of coin sales increases, the price will gradually rise. This structure encourages early participation and prevents the formation of irrational price pressures in later stages.

Schedule of the TSNCOIN Pre-Sale and Official Platform Launch

From the official commencement of the pre-sale phase through the full public launch of the TSNCOIN platform, a precise and pre-planned timeline has been established.

The pre-sale phase officially begins on June 25, 2026, at 18:00 UTC and continues for 6 months, 6 days, and 6 hours, concluding on January 1, 2027, at exactly 00:00 UTC. Immediately following the completion of this phase, the TSNCOIN platform will be officially launched and, coinciding with the beginning of the New Year, will commence operations as a symbol of the birth of a new, global, and forward-looking ecosystem.

More detailed information regarding the pre-sale structure, pricing stages, participation rules, limitations, and operational mechanisms is comprehensively presented in the dedicated TSNCOIN pre-sale whitepaper, and interested parties may refer to that document for a more in-depth review.

Philosophy and Closing Remarks

The Decision-Making Philosophy of TSNCOIN

Plato, the ancient Greek philosopher, considered the best form of governance to be “aristocracy”; a system in which the leadership of society is entrusted to individuals who are wise, just, and virtuous. From his perspective, only those who have attained knowledge, wisdom, and a deep understanding of the common good are qualified to make decisions about the future of a society. In such a structure, power is formed not on the basis of wealth, influence, or popularity, but on merit, knowledge, and responsibility. Plato believed that any system that deviates from this principle will gradually fall into deviation and corruption. Within the TSNCOIN ecosystem, governance and decision-making are formed based on principles aligned with Platonic aristocracy. The development and guidance of this platform are entrusted to individuals who possess specialized knowledge, practical experience, and a deep understanding of digital technologies, decentralized economics, and user behavior. This approach ensures that strategic decisions are made not based on emotion, short-term pressures, or personal interests, but on wisdom, merit, and a long-term vision. The ultimate objective of this philosophy is to create a transparent, fair, and sustainable environment that prioritizes the interests of the entire ecosystem and its user community.

Final Remarks

TSNCOIN is not merely a technological platform or a digital asset, but rather an effort to build a balanced, reliable, and forward-looking ecosystem. This whitepaper presents a transparent framework of the platform’s goals, structures, and fundamental principles; however, the true path of TSNCOIN is shaped through user participation, community growth, and the continuous evolution of technology. We believe that long-term sustainability is achieved only through transparency, accountability, and informed decision-making. With this perspective, TSNCOIN will continue its path toward a cohesive, dependable, and meaningful future.

Slogan and Conceptual Identity

The slogan (Three · Six · Nine | Born · Life · Death) expresses the core philosophy of TSNCOIN. These three numbers symbolize the complete cycle of existence and the continuous movement from beginning to evolution: “Three” represents birth and initiation, “Six” represents life and dynamism, and “Nine” symbolizes the end of one cycle and the beginning of a new stage at a higher level. TSNCOIN views this process not as a linear ending, but as a continuous flow of evolution, where every ending provides the foundation for a new birth. This perspective is directly reflected in the ecosystem design, revenue models, game structures, and the platform’s development path. TSNCOIN is built upon movement, continuity, and the re-creation of value, and this slogan is a precise summary of the brand’s conceptual DNA.

TSNCOIN		
THREE	SIX	NINE
BORN	LIFE	DEATH
